

Pyro

Small IPC for Python

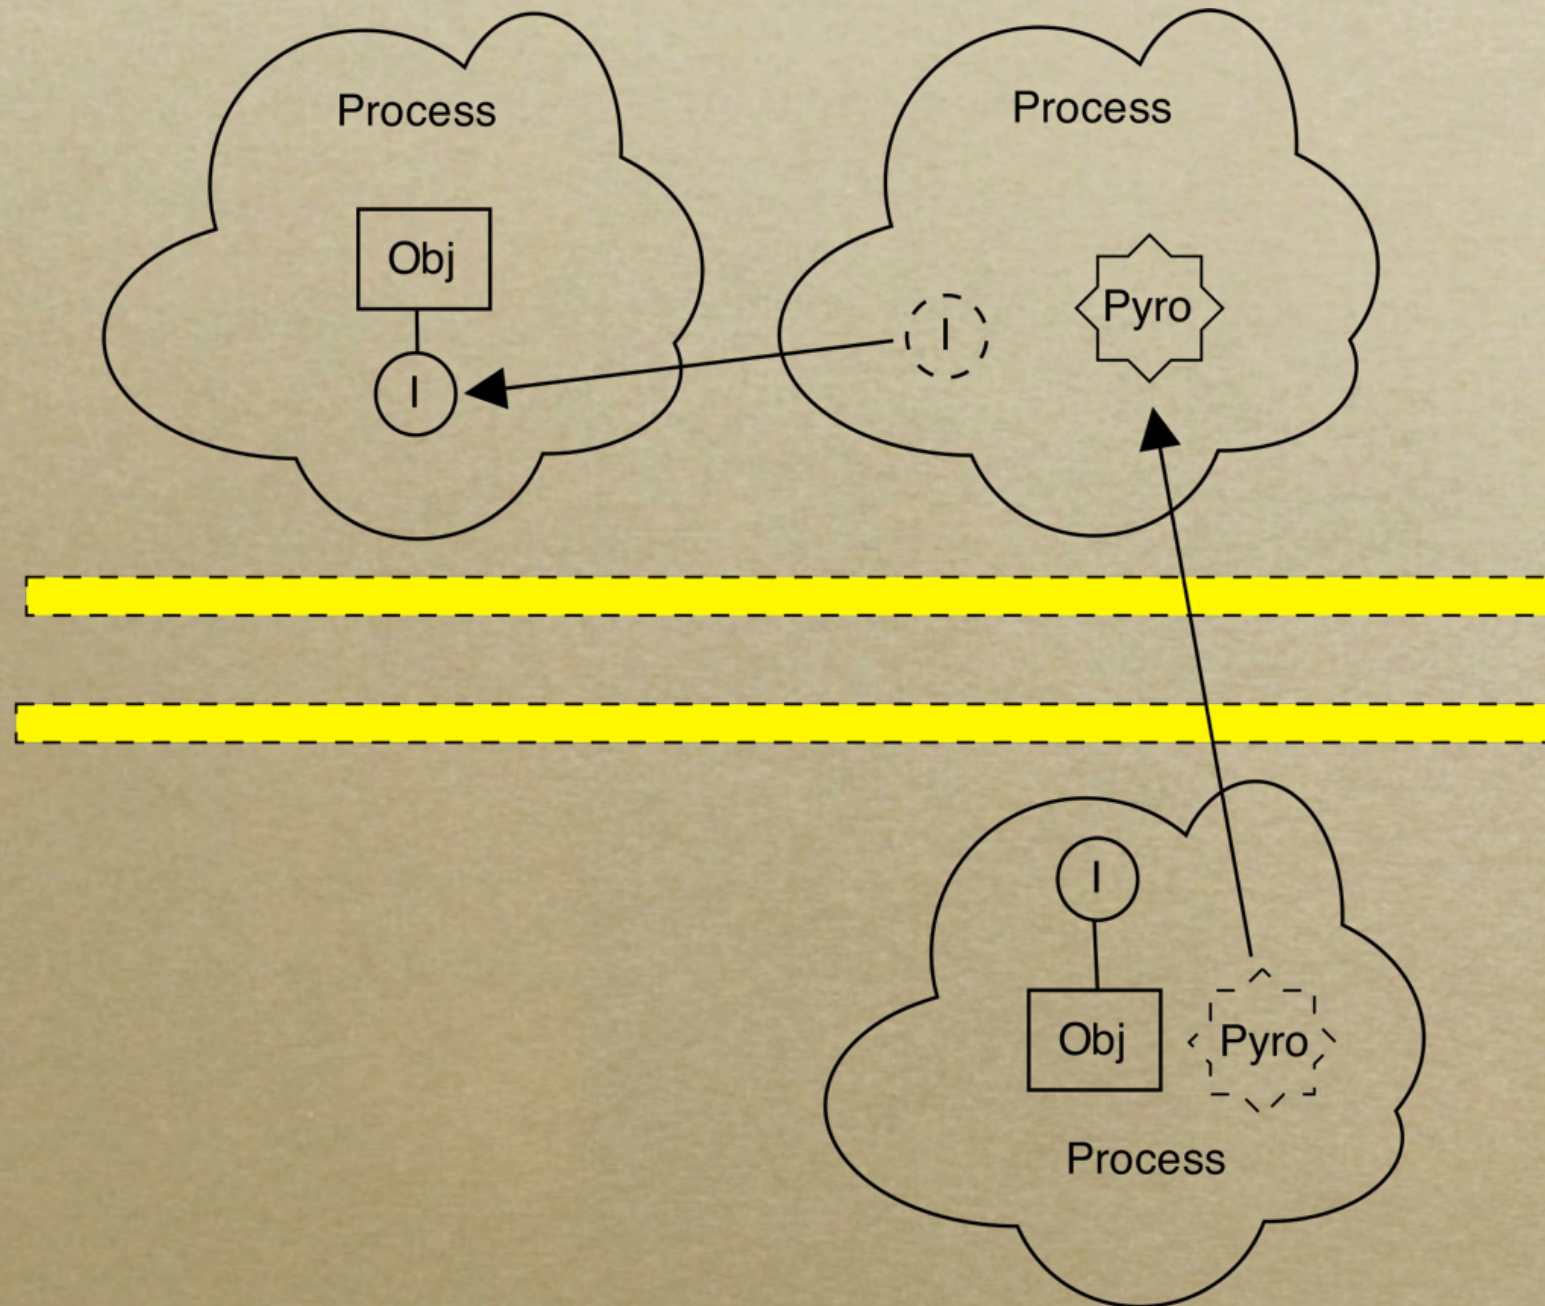

What is it?

- *Flexible, painless, object-oriented IPC within Python*

How do you use it?

- *class pyroservice(object):*
 def method(self, args):
 <do something>
- *daemon = Pyro4.Daemon()*
- *obj = pyroservice()*
- *uri = daemon.register(obj)*
- *daemon.requestLoop()*

How did I use it?

Pyro Limitations

- *implemented in Python (only)*
- *available in Python (only)*
- *have not tested multiplexed objects*
- *security via shared hmac keys (like glish)*
